

PHENIX Work Permit # DRL-2011-012: Beampipe Supports and Alignment

This work permit was never written or issued. The work was performed as worker planned work as it was determined that (a) the redesign, assembly and installation of the beampipe supports was adequately documented by formal PHENIX drawings, and execution of the assembly and installation required no further documented procedure(s).

This note is placed in the file as a placeholder for the subject WP to account for the gap in assigned WP numbers for 2011.
